Lucky Chhabra

Backend-Focused Full Stack Developer

luckychh005@gmail.com | +91-9155813007 | Dhanbad, Jharkhand | https://github.com/Luckychh13

Summary

Backend-focused Computer Science student experienced in building REST APIs using Node.js, Express.js, MongoDB, and PostgreSQL. Skilled in API design, authentication, validation, error handling, Swagger/OpenAPI documentation, automated testing and logging. Familiar with High-Level Design (HLD) and distributed-system fundamentals. Seeking a backend development internship.

Skills

Languages:
JavaScript, TypeScript

Backend
Node.js, Express.js, REST APIs, Middleware, Validation, Error Handling, Logging, API Versioning

Databases
MongoDB, Mongoose, PostgreSQL, Prisma, Drizzle ORM

Authentication & Security
JWT, Access & Refresh Tokens, OAuth 2.0, RBAC, bcrypt

Testing & Version Control
Jest, Supertest, Postman, Swagger/OpenAPI, Git, GitHub

Frontend
React, Next.js, Redux, Redux Toolkit, HTML

System Design (HLD)
Load Balancing, API Gateway, Reverse Proxy, Caching, Database Indexing, Replication & Sharding

Projects

Project Management Backend
Technologies: Node.js, Express.js, MongoDB, Mongoose, JWT, Jest, Supertest

- Designed and implemented RESTful APIs for authentication, project and task management, and protected resources.
- Implemented JWT authentication with access/refresh tokens, email verification, and password reset.
- Implemented project-level role-based access control, validation, centralized error handling, file uploads, and pagination.
- Documented APIs with Swagger/OpenAPI and added automated API tests using Jest and Supertest.

Banking Ledger API
Technologies: Node.js, Express.js, MongoDB, Mongoose, JWT, Zod, bcrypt

- Developed REST APIs for user authentication, email verification, password recovery, account management, balance lookup, and account-to-account transfers.
- Implemented ledger-based transaction processing using MongoDB sessions and transactions, recording debit/credit entries and tracking transaction status.
- Calculated account balances using MongoDB aggregation and implemented immutable ledger entries with idempotency-key checks.
- Added JWT authentication, bcrypt password hashing, token blacklisting, Zod request validation, rate limiting, and email notifications.

TradeNova — Cryptocurrency Market Dashboard
Technologies: Next.js, React, TypeScript, Tailwind CSS, CoinGecko API, GeckoTerminal API

- Built a responsive crypto dashboard featuring paginated market listings, debounced search, currency conversion, and interactive candlestick charts.
- Integrated CoinGecko and GeckoTerminal REST APIs through server-side requests and a Next.js API proxy, with polling-based updates and rate-limit handling.

Education

Amritsar Group of Colleges — B.Tech • 7.6/10 CGPA
Computer Science — Amritsar, Punjab, India • 2023 – 2027

De Nobili C.M.R.I. — Class XII • 89%
ISC — 2023

De Nobili C.M.R.I. — Class X • 90%
ICSE — 2021
